Index

A

Absorbance 4-7
  measurement 4-10
  sample cell 4-9
Absorption spectrum
  atomic 4-4
  molecular 4-5
Accuracy 1-1
Acid-base
  Brønsted formalism 2-5
  buffers 2-40
  conjugate pairs 2-6
  indicators 2-38
  levelling effect 2-6
  polyfunctional 2-44
  reactions 2-5
Activity 2-1, 5-4
Activity coefficient 2-2
Adsorption chromatography 6-4, 6-26
Amphiprotic solvent 2-6
Analyte 1-23, 3-1
Anode 5-2, 5-11
Atomic absorption 4-29
  atomization 4-30
  chopper 4-32
  concentration range 4-34
  hollow cathode lamp 4-30
  instrumentation 4-32
  matrix effects 4-35
  modulation, light beam 4-32
  monochromator 4-33
  sample cell 4-34
  sensitivity 4-34
Atomic emission 4-35
  accuracy 4-38
  calibration curve 4-37
  flames 4-36
  inductively coupled plasma 4-36
  instrumentation 4-37
  sensitivity 4-38
Atomic lines 4-4, 4-28
  bandwidth 4-29
  Doppler broadening 4-29
  pressure broadening 4-29
Atomic masses, table A-6
Atomic spectra 4-3
  absorption 4-4, 4-28
  emission 4-28
Atomization 4-30
  electrothermal 4-31
  flame 4-31
  graphite furnace 4-31
Autoprotolysis 2-8
  constant 2-8
Average 1-3

B

Background 3-1
Band, sample 6-2
Band velocity
  adsorption chromatography 6-7
  partition chromatography 6-4
Bandwidth 6-9, 6-11
Beer-Lambert law 4-6
  deviations, chemical 4-12
  deviations, instrumental 4-13
Blank 4-10, 4-14
Brønsted acid-base reaction 2-5
Buffer capacity 2-42
Buffers 2-40
Burner 4-31, 4-36

C

Calculators, correct use A-2
Calibration curves 3-4
  solution preparation 3-12
Calomel electrode 5-9, 5-14
Capacity factor 6-6, 6-7
Carrier gas 6-21
Cathode 5-2, 5-11
Cell voltage
  end point calculation 5-17
  full cell calculation A-4
  half-cell calculation 5-10
Charge balance equation 2-9
Chopper 4-32
Chromatogram 6-8
Chromatograph 6-8
  gas 6-21
  liquid 6-24
Chromatography
  adsorption 6-4, 6-26
  band velocity 6-4
  bandwidth 6-9, 6-11
  capacity factor 6-6, 6-7
  column 6-3
  detector 6-8, 6-22, 6-25
  gas 6-21
  gas-liquid 6-3
  gas-solid 6-3
  gel permeation 6-27
  HPLC 6-24
  ion exchange 6-28
  isocratic 6-27
  isothermal 6-22
  liquid 6-24
  liquid-liquid 6-3
  liquid-solid 6-3
  normal phase 6-26
  partition 6-4, 6-26
  peak area 6-34
  peak height 6-34
  peak shape 6-10, 6-19
  peaks 6-8
  plate 6-9
  plate height 6-10, 6-12
  plate theory 6-9
  preparative 6-31
  qualitative analysis 6-32
  quantitative analysis 6-33
  rate theory 6-13
  resolution 6-16
  retardation factor 6-31
  retention time 6-5, 6-7
  retention volume 6-5, 6-7
  reversed phase 6-27
  sampling valve 6-24
  size exclusion 6-27
  solvent programming 6-27
  temperature programming 6-23
  thin layer 6-30
  types 6-3, 6-21
  uses 6-31
Column 6-3
  open tubular 6-3, 6-21
  packed 6-3, 6-21, 6-25
Concentration
  formality 1-19
  molarity 1-19
  parts per billion (ppb) 1-19
  parts per million (ppm) 1-18
  weight by weight 1-17
Confidence interval 1-6
Crosslinking agent 6-29
Cuvette 4-6, 4-10, 4-24

D

Dark current 4-10
Debye-Hückel theory 2-2
Degrees of freedom 1-4
Detection limit 3-14
Detector 4-9, 4-25, 6-8, 6-22, 6-25
Dilution
  calculations 1-20
Dissociation constants
  acids, table A-8
  bases, table A-10
  indicators, table A-10

Doppler broadening 4-29

E

Electrochemical cell 5-1
Electromotive force (EMF) 5-3
Electron transfer 5-1
Elemental analysis 4-34
Eluent 6-3
Emission spectrum
  molecular 4-23
  sample cell 4-24
End point 1-23
Equilibrium calculations
  general method 2-8, 2-10
  pure water 2-11
  strong acid-weak acid 2-25
  strong acids 2-11
  strong base-weak base 2-27
  strong bases 2-13
  weak acid-conjugate base 2-21
  weak acids 2-14
  weak bases 2-18
Equilibrium constant 2-1
  redox reactions A-5
Equivalence point 1-23
Errors 1-1
  blunders 1-1
  determinate or bias 1-1
  end point 1-27
  indeterminate or random 1-2
  potentiometric 5-37
  propagation of 1-9
  spectrophotometric 4-16
External reference electrode 5-29

F

Faraday constant 5-3
Flame emission 4-36
Flame ionization detector 6-22
Flame temperature 4-36
Fluorescence 4-22, 4-25
Fluorometer 4-23
Fluorometry
  accuracy 4-27
  calibration curves 4-27
  concentration range 4-27
  linear response 4-26
  quantitative relationship 4-25
Formality 1-19
Fraction collector 6-31
Frequency 4-2
Frit 5-2
Fuel gas 4-31

G

Galvanic cell 5-2
Gas chromatograph 6-21
Gas chromatography 6-21
Gas discharge tube 4-7
Gel permeation chromatography 6-27
Glass electrode 5-28, 5-32
Graphite furnace 4-31

H

H cell 5-1
Half-reaction 5-1, 5-5
  standard potential calculation 5-8
Hollow cathode lamp 4-30

I

Ideal solution 2-1
Indicators
  acid-base 2-38
  redox 5-19
Inductively coupled plasma 4-36
Injection port 6-21
Instrumental response 3-1
  absolute response method 3-2
  background 3-1
  calibration curve method 3-4
  deviations from linearity 3-2
  linear 3-1
  matrix effects 3-5
  sensitivity 3-1
Integrator, chromatographic 6-35
Internal reference electrode 5-29
Internal standard 3-10, 6-35
  calibration curve 3-12
Iodometry 5-21
Ion exchange chromatography 6-28
Ion size parameter 2-2
  table A-8
Ionic strength 2-2
  adjusting buffers 5-36
Isocratic LC 6-27
Isotherm 6-19
Isothermal GC 6-22

L

Law of mass action 2-1
Least squares fitting 1-13
  general method 1-13
  linear case 1-14
Levelling effect 2-6
Light
  absorption 4-3
  detector 4-9
  electronic transitions 4-5
  energy 4-2
  frequency 4-2
  particle description 4-2
  period 4-1
  photon 4-2
  source 4-7, 4-24, 4-30
  wave description 4-1
  wavelength 4-1
Liquid chromatography 6-24
Liquid junction 5-2
Liquid junction potential
  5-29, 5-30, 5-33
Longitudinal diffusion 6-14

M

Mass balance equation 2-9
Matrix effects 3-5
Mean 1-3
Median 1-4
Membrane electrodes 5-27, 5-29
  cell voltage 5-30
  single ion response 5-36
  types 5-31
Membrane potential 5-29, 5-30
Mobile phase 6-3
Mobile phase fraction 6-4, 6-7
Mode 1-4
Modulation, light beam 4-32
Molar absorptivity 4-7
Molarity 1-19
Molecular spectra 4-4
  absorption 4-5
  emission 4-22
Monochromator 4-8, 4-24, 4-33

N

Nebulizer 4-31
Nernst equation 5-4, 5-5, 5-22
  derivation 5-3
Nernstian response 5-32
Normal distribution 1-5

O

Oven
  column 6-21
  detector 6-21, 6-22
  injection port 6-21
Oxidant gas 4-31
Oxidation potential 5-6

P

Partition chromatography 6-4, 6-26

Partition coefficient 6-1, 6-3
Partition ratio 6-1
Peak shape, chromatography
6-10, 6-19
Percent transmittance 4-11
Period 4-1
pH
definition 5-33
measurement 5-32
simple calibration 5-32
temperature compensation 5-32
two buffer calibration 5-32
Photon 4-2
Planck's constant 4-2
Plasma torch 4-37
Plate 6-9
height 6-10
HETP 6-10, 6-12, 6-13
Plate theory 6-9
Polyprotic acids and bases 2-44
Potential 5-3
Potential difference 5-3
Potentiometry 5-22
absolute 5-24
accuracy 5-37
calibration curve method 5-35
cell calibration 5-25
concentration range 5-37
matrix effects 5-27, 5-36
membrane electrodes 5-27
redox electrodes 5-22
standard addition 5-35
two standard method 5-34
Precision 1-1
Pressure broadening 4-29
Primary standard 1-24
redox 5-21
Propagation of errors 1-9
Proton balance equation 2-9

Q

Q, rejection quotient
table A-7
Q test 1-8
Quadratic equation A-1
simplifications A-1
Quadratic formula A-1
roots A-1
Quantum efficiency 4-25

R

Range 1-5
Rate theory 6-13
Redox couple 5-1
Redox half-reaction 5-1
Redox indicators 5-20
Redox reactions
balancing in acid A-2
balancing in base A-3
Redox titratiions 5-15
Reduction potential 5-5
Reference electrode 5-9
Reference reaction 5-5, 5-6
Regression analysis 1-13
Relative retention ratio 6-32
Resolution
chromatographic 6-16
Resonance lines 4-4, 4-33
Retardation factor 6-31
Retention time 6-5, 6-7
Retention volume 6-5, 6-7

S

Sampling valve 6-24
Saturated calomel electrode 5-10
Sensitivity 3-1
Septum 6-21
Signal-to-noise ratio 3-14
Silver chloride electrode 5-10
Size exclusion chromatography 6-27
Solution
ideal 2-1
Solvent
amphiprotic 2-6
Solvent programming 6-27
Speciation 4-35
Spectra
atomic 4-3
molecular 4-4
overlapping 4-18
Spectrophotometer 4-7
Spectrophotometry 4-10
absolute method 4-12
calibration curves 4-14
concentration range 4-16
errors 4-16
multi-colour analysis 4-18
standard addition 4-15
titrations 4-19
Spectroscopy 4-1
Standard addition 3-6, 3-8
electrochemical cells 5-35
graphical approach 3-7, 3-9
Standard deviation 1-4
relative 1-5
Standard hydrogen electrode 5-9
Standard potential 5-4, 5-5, 5-6, 5-7
indicators, table A-14
table A-11
Stationary phase 6-3, 6-22
Statistics topics
accuracy 1-1
confidence interval 1-6
